HOW 365 EXTENDED EMAIL PROTECTION WORKS: NO CHANGE OF MX RECORDS REQUIRED!

Achieving comprehensive email protection takes just seconds with 365 Extended Email Protection. Our simple onboarding process can be easily completed in a few steps, and our cloud email security service is seamlessly integrated with your M365 environment for hassle-free use.

HORNETSECURITY

FACT SHEET

COMPREHENSIVE EMAIL SECURITY FOR MICROSOFT 365

SPAM, VIRUS AND MALWARE FILTERS

✔ Anti-Spam and Anti-Malware

Incoming emails identified as unwanted or even malicious by 365 Extended Email Protection with a high level of certainty are immediately removed from users' inboxes. Hornetsecurity's Threat Intelligence analysis guarantees you a detection rate of 99.99% for spam and 99.9% for viruses.

✔ Anti-Phishing

With the help of link tracking and other techniques, the Anti-Phishing filter effectively protects your users from phishing emails. Incoming emails are automatically scanned for malicious URLs. Among other things, reloadable malicious script commands are detected. This enables detection of dangerous drive-by downloads, for example.

DETECTION OF ADVANCED THREATS

✔ QR Code Analyzer

Our QR code analyzer is able to detect QR codes embedded as image files in emails, which can redirect to other malicious websites - a trick that attackers can use to bypass simple email security applications.

✔ URL-Scanning in Email Attachments

Documents attached to an email (e.g. PDF, DOC, XLS, PPT) often contain further links. URL scanning checks the target of these links to rule out possible malware damage and prevent phishing attacks.

NEXT-GEN THREAT INTELLIGENCE INCLUDED

Hornetsecurity's Security Lab monitors the cybersecurity landscape 24/7 leveraging innovative AI-based attack detection technology that autonomously learns and incorporates new threats into attack detection, keeping us ahead of cybercriminals.
